EnviroSwim is the simple, safe and effective solution to pool sanitation.

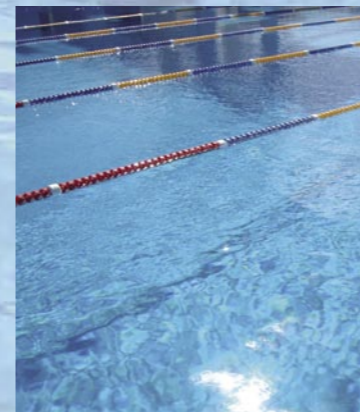

EnviroSwim uses a unique process to create quality water and is ideal for use in both commercial and domestic applications.

Superior to any other system on the market, EnviroSwim is the only one that combines three of the most safe and effective pool sanitation processes. The result is unmatched water quality combined with an absolute minimum of maintenance.

It's not surprising that the EnviroSwim system is sought after by major aquatic facilities and resorts across the United States and Australia.

EnviroSwim – The Facts

The EnviroSwim system is a trouble-free sanitation system that once installed, requires little maintenance saving time and money in the on-going maintenance of the pool, regardless of its size.

Simple

Designed to reduce your maintenance time, the EnviroSwim system is simple to install and operate.

Safe

The EnviroSwim system's unique sanitation process is safe, backed by extensive government laboratory testing, and can be applied to both commercial and domestic pools, spas and water features.

The EnviroSwim system does not produce chemical

side effects such as red-eyes, green hair and skin irritation. The system also supports recycling due to the high water quality levels maintained.*

Effective

The EnviroSwim system does not require the addition of chlorine and is effective against a wide range of bacteria, including some that are resistant to chlorine. It also is effective against algae growth.

Traditional systems require constant intervention due to their volatility. EnviroSwim's highly stable

process allows pools to be left unattended for extended periods, including seasonal shutdown, while maintaining water quality. Rapid return on investment is achieved through reduced operating costs, less maintenance and improved equipment life. Chemical effects such as corrosion are reduced.

The EnviroSwim System

The EnviroSwim System releases a powerful algaecide and bactericide. Laboratory tests indicate the process is 10 times more effective than government guidelines for water disinfection.

Water clarity is enhanced by the powerful oxidation unit which breaks down organic compounds to assist their removal by filtration.

Benefits include the removal and prevention of scale build-up from heat exchangers and other pool equipment as well as the elimination of the offensive chlorine odour from the air in and around pool and spa areas.

Talk to us today to see how you can save money, time and effort in swimming facility maintenance, yet still have safe, clean and clear water.
