

To whom it may concern

The Ecovillage @ Currumbin has operated the Enviroswim system in the resort style pool for over 17 years. The pool is approximately 175,000 litres in capacity with a beach at one end and bays on the other end. Water is tested daily with minimal maintenance required other than removing leaves or other debris. Requirement by law is to have the pool tested for contamination monthly. During the 17 years of operation, there has never been a negative result.

The Ph is very stable and coupled with a dosing system, we have found that adding acid is very minimal.

Many of our residents are always boasting to their visitors about how natural the water feels when they jump in for a swim. This is proven by my recommendations to many customers who are looking into acquiring an Enviroswim system. Many of these customers are associated with the residents who live in the Ecovillage.

One of the biggest acknowledgments to Enviroswim is the after sales service that they provide. After 17 years the service is impeccable, and Gary is always so happy to help on any questions or inquiries I have. He seems to always go the extra mile with his service and support.

As a user of 17 years (private and commercial pools), I can't recommend the Enviroswim system enough. To a point that I would never try any other system.

Regards

Jason Brown
