### TO WHOM IT MAY CONCERN

In a time when there is much concern about various health issues associated with repetitive exposure to chlorine found in pool water, especially, children, attention was brought to address the concern during the project completion and development of the concept of our small luxury 5\* Resort & Wellness, Le Jadis Beach Resort & Wellness, managed by Banyan Tree, having as primary focus, wellness. The purpose was to provide safe and crystal clear naturally sanitized as much as possible in which to enjoy a nice swim in an efficient way.

Finding the right product required being innovative which was rare at that time. We were pleased to find in Enviroswim a right match for a more natural sanitization of our pool water we were looking for:

- All our pools, from the Lagoon Pool to the Infinity Lap Pool, including our 34 private infinity pools, are equipped using Enviroswim, minimizing our reliance on harsh chemicals.
- Out of our 55 Suites, 62% are equipped with infinity private pools (34 pools); 25% have private hammams (14 hammams) and 13% have private Jacuzzis (7 Jacuzzis). Furthermore, all our 34 private pools are heated all year round. Our Lap pool is heated during our winter months from May to October.
- Our multi-jets Hydropool comprising 65 jets was also fitted with an Enviroswim and is heated year round.

In addition to the advantage of reduced cost of operation, most importantly is that 10 years after opening, the team members of Enviroswim are still behind to assist and provide guidelines when required.
